

Anti-Mouse CD90.2 (Thy-1.2) FITC

Catalog Number: 11-0903

Also known as: Thy1.2

RUO: For Research Use Only. Not for use in diagnostic procedures.

Staining of C57Bl/6 splenocytes with Anti-Mouse CD3e APC (cat. 17-0031) and 0.06 ug of FITC Rat IgG2b kappa Isotype Control (cat. 11-4331) (left) or 0.06 ug of Anti-Mouse CD90.2 (Thy-1.2) FITC (right). Cells in the lymphocyte gate were used for analysis.

Product Information

Contents: Anti-Mouse CD90.2 (Thy-1.2) FITC

Catalog Number: 11-0903

Clone: 30-H12

Concentration: 0.5 mg/mL

Host/Isotype: Rat IgG2b, kappa

Formulation: aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

Temperature Limitation: Store at 2-8°C. Do not freeze. Light sensitive material.

Batch Code: Refer to vial

Use By: Refer to vial

Description

The 30-H12 monoclonal antibody reacts with mouse CD90.2, also known as Thy-1.2, a GPI-linked membrane molecule. CD90.2 is expressed by mouse thymocytes and mature T cells as well as neurons in CD90.2-expressing mouse strains. These strains include BALB/c, CBA, C3H, C57BL/6, C58/, SJL and others. Cells from CD90.1-expressing strains including PL and AKR do not stain with 30-H12. CD90 is involved in regulation of adhesion and signal transduction by T cells.

Applications Reported

The 30-H12 antibody has been reported for use in flow cytometric analysis.

Applications Tested

The 30-H12 antibody has been tested by flow cytometric analysis of mouse splenocyte suspensions. This can be used at less than or equal to 0.125 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10⁵ to 10⁸ cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
