

Anti-Rat CD28 Purified

Catalog Number: 14-0280

RUO: For Research Use Only. Not for use in diagnostic procedures.

Staining of Lou Rat splenocytes with 0.5 ug Mouse IgG1 Isotype Control Purified (cat. 14-4714) (open histogram) or 0.5 ug Anti-Rat CD28 Purified (filled histogram) followed by Anti-Mouse IgG FITC (cat. 11-4011). Total viable cells were used for analysis.

Product Information

Contents: Anti-Rat CD28 Purified

 **Catalog Number:** 14-0280

Clone: JJ319

Concentration: 0.5 mg/mL

Host/Isotype: Mouse IgG1

Formulation: aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

Temperature Limitation: Store at 2-8°C.

Batch Code: Refer to Vial

Use By: Refer to Vial

Contains sodium azide

Description

The JJ319 monoclonal antibody reacts with the rat CD28 molecule, expressed by thymocytes, mature T cells, and a subset of NK cells. CD28 is a ligand for CD80 (B7-1) and CD86 (B7-2) and is a potent costimulator of T cells. Signaling through CD28 augments IL-2 and IL-2 receptor expression as well as cytotoxicity of CD3-activated T cells. No reactivity of JJ319 is observed on mouse T cells.

Applications Reported

The JJ319 antibody has been reported for use in flow cytometric analysis, and immunoprecipitation. It has also been reported in *in vitro* T cell costimulation. (Please use Functional Grade purified JJ319, cat. 16-0280, in functional assays.)

Applications Tested

This JJ319 antibody has been tested by flow cytometric analysis of rat splenocyte suspensions. This can be used at less than or equal to 1.0 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10⁵ to 10⁸ cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
