

## Anti-Mouse CD317 (BST2, PDCA-1) PE

Catalog Number: 12-3171

Also Known As: plasmacytoid DC Ag-1, pDC Ag-1, BST 2, PDCA1

RUO: For Research Use Only

Staining of SJL splenocytes with Anti-Human/Mouse CD45R (B220) FITC (cat. 11-0452) and 0.25 µg of Anti-Mouse CD317 (BST2, PDCA-1) PE (left) or Anti-Mouse CD11c APC (cat. 17-0114) and 0.25 µg of Anti-Mouse CD317 (BST2, PDCA-1) PE (right). Cells in the large forward scatter population were used for analysis.

### Product Information

Contents: Anti-Mouse CD317 (BST2, PDCA-1) PE

**REF** Catalog Number: 12-3171

Clone: eBio129c (129c)

Concentration: 0.2 mg/ml

Host/Isotype: Rat IgG2b

Formulation: aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

 Temperature Limitation: Store at 2-8°C. Do not freeze. Light sensitive material.

**LOT** Batch Code: Refer to Vial

 Use By: Refer to Vial

 Caution, contains Azide

### Description

The eBio129c monoclonal antibody reacts with mouse PDCA-1 (BST2, CD317), a specific marker of plasmacytoid dendritic cells (pDC), also known as type I IFN-producing cells (IPC) in the naïve mouse. Mouse IPCs are typically CD11c+, CD11b-, B220+, Ly-6C+, and CD62L+. PDCA-1 is predominantly expressed by IPCs in the naïve mouse which represent a very minor population (<0.5%) of splenocytes. It is upregulated on numerous cell types following stimulation which triggers an IFN response. PDCA-1 cycles between cell surface and intracellular compartments and may function to regulate trafficking of secreted cytokines. PDCA-1 (BST2) is the protein recognized by the antibody 120G8.

The epitope recognized by eBio129c is distinct from eBio927; thus, the antibodies can be used to costain, purify and identify pDCs.

### Applications Reported

This eBio129c (129c) antibody has been reported for use in flow cytometric analysis.

### Applications Tested

This eBio129c (129c) antibody has been tested by flow cytometric analysis of SJL splenocytes. This can be used at less than or equal to 0.5 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from  $10^5$  to  $10^8$  cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
