

## Anti-Mouse CD326 (EpCAM) APC

**Catalog Number:** 17-5791

**Also known as:** epithelial cell adhesion molecule

**RUO: For Research Use Only. Not for use in diagnostic procedures.**

Staining of the TE-71 cell line with 0.06 ug of Rat IgG2a K Isotype Control APC (cat. 17-4321) (blue histogram) or 0.06 ug of Anti-Mouse CD326 (EpCAM) APC (purple histogram). Total viable cells, as determined by Fixable Viability Dye eFluor® 450, were used for analysis.

### Product Information

**Contents:** Anti-Mouse CD326 (EpCAM) APC

**Catalog Number:** 17-5791

**Clone:** G8.8

**Concentration:** 0.2 mg/mL

**Host/Isotype:** Rat IgG2a, kappa

**Formulation:** aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer

**Temperature Limitation:** Store at 2-8°C. Do not freeze. Light sensitive material.

**Batch Code:** Refer to vial

**Use By:** Refer to vial

**Contains sodium azide**

### Description

The G8.8 monoclonal antibody reacts with the 40 kDa mouse EpCAM (epithelial cellular adhesion molecule), also known as EGP40 (epithelial glycoprotein 40), 17-1A antigen, TACSTD1 (tumor-associated calcium signal transducer 1), and CD326. The immunogen used to generate the G8.8 antibody was the TE-71 thymic epithelial cell line. CD326 is expressed on the majority of epithelial cells, and is considered a pan-carcinoma antigen. CD326 mediates calcium-independent, homophilic, cell-cell adhesion and may function as a growth factor receptor. The antigen is being used as a target for immunotherapy treatment of human carcinomas. CD326 binds LAIR-1 (CD305) and LAIR-2 (CD306) to inhibit cellular activation and inflammation. This epithelial glycoprotein is now recognized as having an important role in tumor biology.

### Applications Reported

This G8.8 antibody has been reported for use in flow cytometric analysis.

### Applications Tested

This G8.8 antibody has been tested by flow cytometric analysis of the TE-71 cell line. This can be used at less than or equal to 0.125 µg per test. A test is defined as the amount (µg) of antibody that will stain a cell sample in a final volume of 100 µL. Cell number should be determined empirically but can range from 10<sup>5</sup> to 10<sup>8</sup> cells/test. It is recommended that the antibody be carefully titrated for optimal performance in the assay of interest.
