

# Mouse IL-3 Antibody

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: AF-403-NA

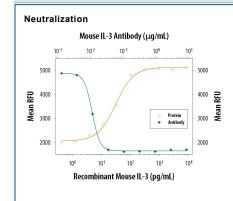

DESCRIPTION			
Species Reactivity	Mouse		
Specificity	Detects mouse IL-3 in direct ELISAs and Western blots. In direct ELISAs, less than 1% cross-reactivity with recombinant human IL-3 is observed.		
Source	Polyclonal Goat IgG		
Purification	Antigen Affinity-purified		
Immunogen	E. coli-derived recombinant mouse IL-3 Asp33-Cys166 Accession # P01586		
Endotoxin Level	<0.10 EU per 1 µg of the antibody by the LAL method.		
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS with Trehalose. See Certificate of Analysis for details.		

## **APPLICATIONS**

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

	Recommended Concentration	Sample
Western Blot	0.1 μg/mL	Recombinant Mouse IL-3 (Catalog # 403-ML)
Neutralization	lymphoblast cell line.	to neutralize IL-3-induced proliferation in the M-NFS-60 mouse myelogenous leukemia Holmes, K.L. <i>et al.</i> (1985) Proc. Natl. Acad. Sci. USA <b>82</b> :6687. The Neutralization Dose 1-0.03 μg/mL in the presence of 0.5 ng/mL Recombinant Mouse IL-3.

## DATA

Rev. 12/15/2010 Page 1 of 2

Cell Proliferation Induced by IL-3 and Neutralization by Mouse IL-3 Antibody. Recombinant Mouse IL-3 (Catalog # 403-ML) stimulates proliferation in the M-NFS-60 mouse myelogenous leukemia lymphoblast cell line in a dosedependent manner (orange line). Proliferation elicited by Recombinant Mouse IL-3 (0.5 ng/mL) is neutralized (green line) by increasing concentrations of Mouse IL-3 Antigen Affinity-purified Polyclonal Antibody (Catalog # AF-403-NA). The  $\mathrm{ND}_{50}$  is typically 0.01-0.03  $\mu g/mL$ .

PREPARATION AND STORAGE			
Reconstitution	Reconstitute at 0.2 mg/mL in sterile PBS.		
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.		
Stability & Storage	Use a manual defrost freezer and avoid repeated freeze-thaw cycles.  12 months from date of receipt, -20 to -70 °C as supplied.  1 month from date of receipt, 2 to 8 °C, reconstituted.  6 months from date of receipt, -20 to -70 °C, reconstituted.

## Mouse IL-3 Antibody

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: AF-403-NA

#### **BACKGROUND**

Interleukin 3 is a pleiotropic factor produced primarily by activated T cells that can stimulate the proliferation and differentiation of pluripotent hematopoietic stem cells as well as various lineage committed progenitors. In addition, IL-3 also affects the functional activity of mature mast cells, basophils, eosinophils and macrophages. Because of its multiple functions and targets, it was originally studied under different names, including mast cell growth factor P-cell stimulating factor, burst promoting activity, multi-colony stimulating factor, thy-1 inducing factor and WEHI-3 growth factor. In addition to activated T cells, other cell types such as human thymic epithelial cells, activated mouse mast cells, mouse keratinocytes and neurons/astrocytes can also produce IL-3. At the amino acid sequence level, mature human and mouse IL-3 share only 29% sequence identity. Consistent with this lack of homology, IL-3 activity is highly species-specific and human IL-3 does not show activity on mouse cells.

IL-3 exerts its biological activities through binding to specific cell surface receptors. The high affinity receptor responsible for IL-3 signaling is composed of  $\alpha$  and  $\beta$  subunits. The IL-3R $\alpha$  is a member of the cytokine receptor super family and binds IL-3 with low affinity. Two distinct  $\beta$  subunits, AIC2A ( $\beta_{\text{IL-3}}$ ) and AIC2B ( $\beta_{\text{c}}$ ) are present in mouse cells.  $\beta_{\text{IL-3}}$  also binds IL-3 with low affinity receptor with the  $\alpha$  subunit. The  $\beta_{\text{c}}$  subunits does not bind any cytokine but forms functional high affinity receptors with the  $\alpha$  subunit of the IL-3, IL-5 and GM-CSF receptors. Receptors for IL-3 are present on bone marrow progenitors, macrophages, mast cells, eosinophils, megakaryocytes, basophils, and various myeloid leukemic cells.
