Technical Data Sheet

PE Mouse anti-Human IL-17A

Product Information

Material Number: 560436

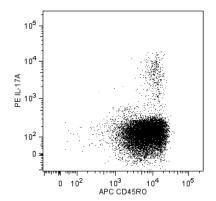

Alternate Name: IL-17; IL-17A; CTLA8; Cytotoxic T-lymphocyte-associated serine esterase 8

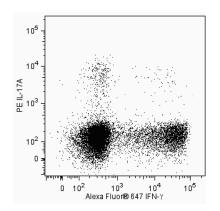

Reactivity: QC tested and Reported: Human

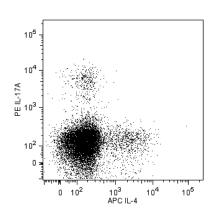

Storage Buffer: Aqueous buffered solution containing BSA and ≤0.09% sodium azide.

Description

Human IL-17A, also known as IL-17, is a proinflammatory cytokine that is encoded by the IL17A gene in chromosome 6. IL-17A is produced as a disulfide-linked homodimer comprised of two mature 136-amino acid polypeptides. It is a member of the IL-17 family of structurally related cytokines, designated IL-17A through IL-17F. Activated memory T cells, especially Th17 cells (specialized IL-17A-producing CD4+ T cells distinct from Th1 and Th2 cells) produce IL-17 and provide protective immunity against pathogens. Activated CD8+ T cells, $\gamma\delta$ T cells, NK cells and neutrophils can also be activated to produce IL-17A. IL-17A binds to and exerts its biological activity through IL-17 receptors (IL-17R) that are expressed by a variety of target cells including fibroblasts, epithelial and endothelial cells, monocytes/macrophages and mast cells. The ubiquitous IL-17R expression pattern may explain the broad tissue responsiveness to IL-17. IL-17 induces stromal cells to secrete cytokines and chemokines involved in inflammatory and hematopoietic processes. For example, IL-17 induces fibroblasts to produce IL-6, IL-8, G-CSF and express increased surface ICAM-1. The SCPL1362 antibody reacts with human IL-17A.

Flow cytometric analysis of PE anti-human IL-17A on stimulated PBMC. Human PBMC were stimulated with PMA/lonomycin in the presence of BD GolgiStop™ (Cat. No. 554724) for 5 hours. Cells were then fixed and permeabilized using BD Cytofix/Cytoperm™ reagents (Cat. No. 554714) followed by staining with PE anti-human IL-17A, PerCP anti-human CD4 (Cat. No. 347324), and either APC anti-human CD45RO (Cat. No. 559865; Left Panel) or Alexa Fluor® 647 anti-human IFN-γ (Cat. No. 557729; Middle Panel) or APC anti-human IL-4 (Cat. No. 554486; Right Panel). The dot plots were derived from a CD4+ lymphocyte gate. Flow cytometry was performed on a BD FACSCalibur™ System.

Preparation and Storage

Store undiluted at 4°C and protected from prolonged exposure to light. Do not freeze.

The monoclonal antibody was purified from tissue culture supernatant or ascites by affinity chromatography.

The antibody was conjugated with R-PE under optimum conditions, and unconjugated antibody and free PE were removed.

Application Notes

Application

Intracellular staining (flow cytometry)

Routinely Tested

Suggested Companion Products

Catalog Number	Name	Size	Clone
554724	Protein Transport Inhibitor (Containing Monensin)	0.7 ml	(none)
554714	BD Cytofix/Cytoperm™ Fixation/Permeablization Kit	250 tests	(none)
559865	APC Mouse Anti-Human CD45RO	100 tests	UCHL1
557729	Alexa Fluor® 647 Mouse Anti-Human IFN-γ	100 tests	B27
554486	APC Rat Anti-Human IL-4	0.1 mg	MP4-25D2
551436	PE Mouse IgG1 Kappa Isotype Control	50 tests	MOPC-21

Product Notices

- 1. This reagent has been pre-diluted for use at the recommended Volume per Test. We typically use 1 × 10⁶ cells in a 100-μl experimental sample (a test).
- 2. For fluorochrome spectra and suitable instrument settings, please refer to our Fluorochrome Web Page at www.bdbiosciences.com/colors.
- Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing.
- 4. Source of all serum proteins is from USDA inspected abattoirs located in the United States.
- 5. Please refer to www.bdbiosciences.com/pharmingen/protocols for technical protocols.
