Notice to Purchaser: Disclaimer of License

The ABI PRISM® Linkage Mapping Sets are optimized for use in the polymerase chain reaction (PCR) covered by patents owned by Roche Molecular Systems, Inc. and F. Hoffmann-La Roche Ltd. No license under these patents to use the PCR Process is conveyed expressly or by implication to the purchaser by the purchase of these products. A license to use the PCR Process for certain research and development activities accompanies the purchase of certain Applied Biosystems reagents when used in conjunction with an authorized thermal cycler, or is available from Applied Biosystems. Further information on purchasing licenses to practice the PCR Process may be obtained by contacting the Director of Licensing at Applied Biosystems, 850 Lincoln Centre Dr., Foster City, California 94404 or Roche Molecular System, Inc., 1145 Atlantic Avenue, Alameda, California 94501.

ABI PRISM and its design, Applied Biosystems, GeneScan, LIZ, and VIC are registered trademarks of Applied Biosystems or its subsidiaries in the U.S. and certain other countries.

AB (Design), Applera, FAM, GeneScan, NED, and POP-4 are trademarks of Applied Biosystems or its subsidiaries in the U.S. and certain other countries.

Introduction

1

Overview

In This Chapter The following topics are covered in this chapter:

Topic	See Page
Product Overview	1-2
Panel Guide Overview	1-3

Intended Use of This Document

The following information is contained in this document:

- ◆ A brief description of the ABI PRISM® Linkage Mapping Set version 2.5
- ◆ A visual display of the location of each marker on the chromosomes with relative spacing of markers
- ◆ Tables of each panel that list the loci, indicate the dye label, heterozygosity, allelic size range, and genotype data of each marker

This is not a stand-alone document. Use this document as a companion to the *ABI PRISM Linkage Mapping Set v2.5 User Guide* (P/N 4330202). The user guide contains important information on how to order, use, analyze, and troubleshoot the Linkage Mapping Set v2.5.

Note Revised November, 2002. The ABI PRISM® Linkage Mapping Set version 2.5 Panel Guide was revised to reflect more accurate marker-specific information. Revised information includes updated allelic size ranges for each marker, as well as reference genotypes for CEPH individual 1347-02 derived using the ABI PRISM® 3100 Genetic Analyzer and the GeneScan™-500 LIZ® Size Standard.

Product Overview

Product Description

The Linkage Mapping Set v2.5 comprises 811 fluorescently labeled PCR primer pairs (markers) that define a ~5 centiMorgan (cM) resolution human index map.

The loci were selected from the Généthon human linkage map,^{1,2,3} based on chromosomal locations and heterozygosity. The map positions were generated from the same CEPH genotype data used for the 1996 Généthon map³.

Product Configurations

The Linkage Mapping Set v2.5 is available in two configurations:

- ◆ Linkage Map Set v2.5 HD5 defines an approximately 5-cM resolution human index map.
- ◆ Linkage Mapping Set v2.5 MD10 defines an approximately 10-cM resolution human index map.

About Linkage Mapping Set v2.5

The Linkage Mapping Set v2.5 contains fluorescent dye-labeled primer pairs that generate PCR products that can be combined and detected in a single lane or capillary injection.

These primers have been designed to ensure efficient PCR amplification under a single set of conditions and to produce products over a broad molecular weight range.

Sources of Mapping Information

The majority of population and mapping data used in the development of these markers was obtained from the CEPH database:

<http://www.cephb.fr/>

Other sources of mapping information that you may want to use are the:

- ◆ National Center for Biotechnology Information (NCBI)
<http://www.ncbi.nlm.nih.gov/>
- ◆ Genome Database
<http://www.gdb.org>

Overlapping alleles are distinguished by labeling with three different fluorescent dyes: [FAM]TM, [VIC][®], and [NED]TM, which are displayed on ABI PRISM genetic analysis systems as blue, green, and yellow respectively.

About Linkage Mapping Set Panels

The Linkage Mapping Set v2.5 markers are organized into 86 panels. All 86 panels comprise Linkage Mapping Set v2.5 HD5, but only panels 1 through 28 comprise Linkage Mapping Set v2.5 MD10.

You can order these markers as kits or as individual primer pairs. For product ordering information, see the *ABI PRISM Linkage Mapping Set v2.5 User Guide*.

1. Weissenbach, J., et. al. 1992. A second-generation linkage map of the human genome. *Nature* **359**:794–801.

2. Gyapay, G. et. al. 1994. Généthon Human Genetic Linkage Map. *Nature Genet.* **7**:246–339.

3. Dib, C., et. al. 1996. *Nature* **380**:6570, 152–154.

Panel Guide Overview

About This Guide This panel guide is designed as a reference tool for researcher scientists using the Linkage Mapping Set v2.5.

Maps The chromosome maps in Chapter 2 are sex-averaged maps that list the distance between markers in centiMorgans (cM) as determined from the CEPH data and the marker's panel number.

Panel Description Each panel consists of a group of markers that can be loaded into one capillary or into one lane in a gel. To gain the most efficiency, panels may contain markers from more than one chromosome. In this guide, each panel is represented by a table with the information below.

Panel Table Description

Column Heading	Description									
Panel Number	An orderable group of markers.									
Locus	The location of marker on the chromosome.									
Dye Label	Marker dye labels are distinguished by the Dye Label column and by the shading of the rows in the tables. <table border="1"><thead><tr><th>Dye Label</th><th>Color of Rows</th></tr></thead><tbody><tr><td>[FAM]</td><td>Blue</td></tr><tr><td>[VIC]</td><td>Green</td></tr><tr><td>[NED]</td><td>Yellow</td></tr></tbody></table>		Dye Label	Color of Rows	[FAM]	Blue	[VIC]	Green	[NED]	Yellow
Dye Label	Color of Rows									
[FAM]	Blue									
[VIC]	Green									
[NED]	Yellow									
Heterozygosity	Marker heterozygosity (het) is given to enable users to see the informativeness of a particular marker. Note The values provided are based on the CEPH data and may vary for other populations.									
Allele Size Range	The allele size range is based on the range of sizes seen for this marker in the CEPH database. Because we have optimized and tailed the markers and because the range has been extrapolated from the control values, the sizes seen for 1347-02 will not match those in the CEPH database. For more details on sizing precision, see the <i>ABI PRISM Linkage Mapping Set v2.5 User Guide</i> .									

Panel Table Description *(continued)*

Column Heading	Description
Control Genotype	<p>The control genotypes (GT) are from CEPH individual 1347-02. These values were observed when the products were run on an ABI PRISM® 3100 Genetic Analyzer using a 36-cm array, POP-4™ polymer, and the GeneScan™-500 LIZ® size standard. The fragments were sized using ABI PRISM® GeneScan® Analysis Software v3.7 using the local southern algorithm.</p> <p>IMPORTANT You may observe sizes other than those stated in this panel guide. Sizing variation may occur when you run your sample under conditions that are slightly different from those used for the control genotype of the CEPH individual (stated above). For example, the following conditions may vary in your laboratory:</p> <ul style="list-style-type: none"> ◆ Sequencing instrument ◆ Sequencing buffer and/or conditions ◆ Sizing algorithm ◆ Mathematical rounding <p>To account for variation resulting from varying run conditions, we recommend that you load a control sample for each panel in a run. This control should give a consistent size (standard deviation of 0.15 bp) for the specific run conditions that you use.</p> <p>If the size that you determine varies from the size given in this guide, then the base pair separation of the two alleles of each marker should be consistent. For example, this guide lists a marker that has two alleles, one at 284 bp and one at 288 bp, giving a separation of 4 bp. If you observe a consistent allele call of 283 bp and 287 bp, this should not be of concern because the allelic separation is still 4 bp.</p>

Note Revised November, 2002. The ABI PRISM® Linkage Mapping Set version 2.5 Panel Guide was revised to reflect more accurate marker-specific information. Revised information includes updated allelic size ranges for each marker, as well as reference genotypes for CEPH individual 1347-02 derived using the ABI PRISM® 3100 Genetic Analyzer and the new GeneScan™-500 LIZ® Size Standard.

Panels and Markers by Chromosome Number
